

Overview

- Seeks to leverage the structure & steepness of the money market yield curve
- Investments are into high quality & liquid bonds/CPs with less than 1 year residual maturity
- The idea follows a roll down strategy and generates capital gain if rate drops or spread compresses.
- Ideal for tenor between 3 to 12 months

Opportunity in the short term segment

- Currently, spreads are wide and expected to compress as regulators continue to provide liquidity
- Low interest rates are likely to continue

Investment Strategy

- The portfolio strategy would involve buying 6-9 month instruments & selling after 3-6 months at the 3-6 month rate, given the steepness available.
- By investing in 9 months CP/Bonds and holding it for 3 months, investor earns 7.00%+ Roll down benefit 0.46%.
- Liquid fund returns for this month have spiked up and are around 6%
- Even if the 6 month rate during exit rises by 25 bps, the portfolio would still generate a considerably attractive return of ~6.96%

Advantages:

- Credit control through customized portfolios
- Yield pick-up with ability to take advantage of yield curve steepness
- Potential for capital gains through roll-down leading to higher returns
- No commingling impact like in mutual funds
- As liquidity improves, spreads will likely compress, leading to an added benefit

Performance Comparison

Annualized returns as on 31st March, 2020

Scheme / Sector Name	1 Month	3 Months	6 Months	Since Inception (03/05/2019)
Liquid Fund Category Average	6.09%	5.39%	5.36%	5.98%
Liquid Alternate Strategy	6.30%	7.23%	7.47%	7.96%
