

## Overview

- Seeks to leverage the structure & steepness of the money market yield curve
- Investments are into high quality & liquid bonds/CPs with less than 1 year residual maturity
- The idea follows a roll down strategy and generates capital gain if rate drops or spread compresses.
- Ideal for tenor between 3 to 12 months

## Opportunity in the short term segment

- Currently, spreads remain stretched & are expected to compress as regulators continue to aid liquidity
- Benign inflation outlook could lead to further monetary easing

## Investment Strategy

- The portfolio strategy would involve buying 6-9 month instruments & selling after 3-6 months at the 3-6 month rate, given the steepness available.
- By investing in 9 months CP/Bonds and holding it for 3 months, investor earns 6.40%+ Roll down benefit 0.55%.
- Liquid fund returns have dropped below 5.75%, in line with current market rates of up to 3 months.
- Even if the 6 month rate during exit rises by 25 bps, the portfolio would still generate a considerably attractive return of ~6.50%

## Advantages:

- Credit control through customized portfolios
- Yield pick-up with ability to take advantage of yield curve steepness
- Potential for capital gains through roll-down leading to higher returns
- No commingling impact like in mutual funds
- As liquidity improves, spreads will likely compress, leading to an added benefit

## Performance Comparison

### Annualized returns as on 31st October, 2019

Scheme / Sector Name	1 Month	2 Months	3 Months	Since Inception (3/5/19)
Liquid Fund Category Average	5.45%	5.32%	5.53%	6.08%
Arbitrage Fund Category Average	7.62%	5.52%	5.58%	6.43%
Liquid Alternate Strategy	7.78%	7.89%	8.36%	8.42%
