Liquid Alternate Strategy

Take advantage of the steepness in the money market yield curve

January 2022

Product Snapshot	Tax Rate	Minimum Ticket Size	Inception Date
Bonds are directly delivered to the investor demat account	Maximum Marginal Rate	₹5 Cr	3 rd May 2019

Overview

- ✓ Seeks to leverage the structure & steepness of the money market yield curve
- ✓ Investments are into high quality & liquid bonds/CPs with less than 1 year residual maturity
- ✓ The idea follows a roll down strategy and generates capital gain if rate drops or spread compresses.
- ✓ Ideal for tenor between 3 to 12 months

Opportunity in the short term segment

- ✓ Currently, spreads are wide and expected to compress as regulators continue to provide liquidity
- ✓ Low interest rates are likely to continue.

Investment Strategy

- ✓ The portfolio strategy would involve buying 9-12 month instruments & selling after 3-6 months at the 6 months rate, given the steepness available.
- ✓ By investing in 9-12 months CP/Bonds and holding it for 3 months, investor earns 5.00%+ Roll down benefit 0.38%.
- ✓ Liquid fund returns have fallen below 3.30%
- ✓ Even if the 6 month rate during exit rises by 25 bps, the portfolio would still generate a considerably attractive return of 4.73%
